THE UGANDA INTER SCHOOL VIRTUAL A LEVEL MATHEMATICS SEMINAR 2023.

Saturday 08^{th} July 2023 (9:00 a.m)

INSTRUCTIONS TO STUDENTS AND TEACHERS:

Dear students and teachers we would like to welcome you to participate in the forthcoming Mathematics seminar for senior six students. This is in preparation for the forthcoming final exams(UNEB) and the Mock Examinations. **This is a free seminar and no one should charge you any fees**.The process to be followed by both the teachers and students is suggested below:

1. Teachers share the Seminar questions with their students and ask for volunteers to discuss any of the questions. Questions should be pinned up and learners write down all the questions in their books.
2. Teachers talk to the school administrators to allow the children participate as presenters in the seminar on Saturday **08th July from 09:00am - 2:00 pm.** Other students will just be participants.
3. The student together with the teachers select atleast two best done presentations and the students to represent the school.The solutions and pictures/videos should be uploaded on padlet.https://bit.ly/S4MATHSEMINAR2023
4. Hold a mock presentation where all your discussants present to the rest of the class.After that release the rest of the class and record your best presenter in a very quiet environment but with good light.Record each part of the question separately .
5. The teacher could now train the student on how to present on zoom as far as sharing a screen and using the whiteboard. Alternatively the students' presentation will be loaded on the computer screen and they explain to us their solution.

SEMINAR DETAILS

S.6 virtual Mathematics seminar 2023.

Time: 08 JULY 2023, 09:00 AM

Join Zoom Meeting
https://rb.gy/ycpxl
Meeting ID:5482356459
Passcode: HeLP23
Kindly register your school using the survey link https://shorturl.at/vK059 .

P425/1	P425/2
1. Analysis (6 questions) (a) Differentiation (b) Intergration (c) Differential equations 2. Vectors (2 questions) (a) Vectors in 2-D (b) Vectors in 3-D (c) Ratio theorem (d) Line and their properties (e) Planes and their properties 3. Trigonometry (2 questions) 4. Geometry (2 questions) (a) Coordinate geometry of lines and triangles (b) Locus and circles (c) Parabola 5. Algebra (4 questions) (a) Surds,indices and logarithms (b) Quadratics (c) Polynomials (d) Simultaneous equations (e) Inequalities (f) Partial fractions (g) Complex numbers (h) Permutation and combinations	1. Mechanics (6 questions) (a) Calculus of vectors (b) General motion of the body (c) Relative motion (d) Projectiles (e) Newtonian mechanics (f) e.t.c 2. Numerical analysis (4 questions) (a) Location of the roots of an equation (b) Trapezium rule of numerical intergration (c) Newton raphson method (d) Errors (e) Flow charts 3. Statitics and probability(6 questions) (a) Mean ,node,median (b) Index numbers (c) Correlation coefficient (d) Scatter diagram (e) Discrete probability distributions (f) Continous probability distributions (g) Distributions i. Uniform distribution ii. Normal distribution iii. Binomial distribution iv. Normal approximation to binomial distribution (h) Estimations

"Yesterday's failures are today's seeds that must be diligently planted to be able to abundantly harvest tomorrow's success."

PURE MATHEMATICS (P425/1)

ALGEBRA

1. (a) The seventh term of an arithmetic progression is equal to twice the fifth term. The sum of the first seven terms is 84. Find the first term.

   (b) The seventh term of a geometric progression is equal to twice the fifth term. The sum of the first seven terms is 254 and the terms are all positive. Find the first term, showing that it can be written in the form $p + q\sqrt{r}$ where p, q and r are integers.

2. The first four terms in the binomial expansion of $(3 + kx)^5$, in ascending powers of x , can be written as $a + bx + cx^2 + dx^3$.

   (a) Given that $b = c$,find the value of k

   (b) Hence find the value of d

3. The term independent of x in the expansion of $\left(2x + \frac{k}{x}\right)^6$,where k is a constant ,is 540.

   (a) Find the value of k

   (b) For this value of k ,find the coefficient of x^2 in the expansion

4. The polynomial $2x^3 - 5x^2 + ax + b$,where **a** and **b** are constants,is denoted by $f(x)$.It is given that when $f(x)$ is divided by $(x+2)$ the remainder is 8 and that when $f(x)$ is divided by $(x - 1)$ the remainder is 50.

   (a) Find the value of a and the value of b.

   (b) When **a** and **b** have these values,find the quotient and remainder when $f(x)$ is divided by $x^2 - x + 2$.

5. Solve the simultaneous equations,giving your answers in exact form

   (a)

$$e^{3x+4y} = 2e^{2x-y}$$
$$e^{2x+y} = 8e^{x+6y}$$

   (b)

$$2\text{In}x + \text{In}y = 1 + \text{In}5$$
$$\text{In}10x - \text{In}y = 2 + \text{In}2$$

6. (a) Show that $1 + i$ is a root of the equation $z^4 + 3z^2 - 6z + 10 = 0$.Hence find other roots

   (b) Given that the complex number z and its conjugate $\bar{z}$ satisfy the equation $z\bar{z} - 2z + 2\bar{z} = 5 - 4i$.Find the possible values of z

7. A geometric progression has first term a , where $a \neq 0$, and common ratio r , where $r \neq 1$. The difference between the fourth term and the first term is equal to four times the difference between the third term and the second term.

(a) Show that $r^3 - 4r^2 + 4r - 1 = 0$.

(b) Show that $r-1$ is a factor of $r^3-4r^2+4r-1=0$. Hence factorise $r^3-4r^2+4r-1=0$.

(c) Hence find the two possible values for the ratio of the geometric progression. Give your answers in an exact form

(d) Prove that the sum to infinity is $\frac{1}{2}a(1+\sqrt{5})$

8. Let

$$f(x) = \frac{3x}{(1+x)(1+2x^2)}$$

(a) Express $f(x)$ in partial fractions.

(b) Hence obtain the expression of $f(x)$ in ascending powers of x ,upto and including the term in x^3

9. The circumference round the trunk of a large tree is measured and found to be 5.00 m. After one year the circumference is measured again and found to be 5.02 m.

(a) Given that the circumferences at yearly intervals form an arithmetic progression, find the circumference 20 years after the first measurement.

(b) Given instead that the circumferences at yearly intervals form a geometric progression, find the circumference 20 years after the first measurement.

10. (a) Use De - moivre's theory to show that

$$16\sin^5\theta = \sin 5\theta - 5\sin 3\theta + 10\sin\theta$$

(b) Prove that $3i+2$ is a root to the equation

$$Z^4 - 5Z^3 + 18Z^2 - 17Z + 13 = 0$$

and hence find all other roots to this equation.

11. The solutions of the equation $|4x-1| = |x+3|$ are $x = p$ and $x = q$, where $p < q$. Find the exact values of p and q , and hence determine the exact value of $|p-2| = |q-1|$.

12. (a) Solve the equation

i. $2 - 5e^{-x} + 5e^{-2x} = 0$

ii. $\sqrt{2-x} + \sqrt{3+x} = 3$

(b) Solve the simultaneous equation:

$$\frac{x-y}{4} = \frac{z-y}{3} = 2z - x$$
$$x + 3y + 2z = 4$$

13. (a) The function $f(x) = x^3 + px^2 - 5x + q$ has a factor $(x-2)$ and has a value of 5 when $x = -3$.Find p and q

(b) The roots of the equation $ax^2 + bx + c = 0$ are α and β.Form the equation whose roots are $\frac{\alpha}{\beta}$ and $\frac{\beta}{\alpha}$

(c) Simplify $\frac{\sqrt{3}-2}{2\sqrt{3}+3}$ in the form $p + q\sqrt{3}$ where p and q are rational numbers.

VECTORS

14. (a) Find the cartesian equation of the line of intersection of the two planes $2x-3y-z=1$ and $4y+3x+2z=3$

    (b) Vectors **a,b** and **c** form the three sides of a triangle.Given that $|a|=5$,$|b|=12$ and **a.b**=$30\sqrt{3}$,find the area of the triangle

15. The position vectors of points A and B are **OA**=$2i-4j-k$ and **OB**=$5i-2j+3k$ respectively.The line AB is produced to meet the plane $2x+6y-3z=-5$ at a point C.Find the;

    (a) Coordinates of C

    (b) Angle between AB and the plane

16. Find the points of intersection of the line $\frac{x}{5}=\frac{y+2}{2}=\frac{z-1}{4}$ with the plane $3x+4y+2z-25=0$

17. (a) A,B and C are vertices of a triangle with position vectors $5i+7j-9k, 7i+6j+2k$ and $11i+3j+k$ respectively.Using vectors prove that ABC is right angled and hence find its area.

    (b) A perpendicular from a point Q$(3,-2,10)$ meets the line

$$r=\begin{pmatrix}8\\-1\\7\end{pmatrix}+\lambda\begin{pmatrix}4\\3\\-2\end{pmatrix}$$ at N,find the

    i. coordinates of N

    ii. perpendicular distance of Q from the line above

18. (a) The position vectors of the points P and Q are $4i-3j+5k$ and $i+2j$ respectively.Find the coordinates of the point R such that $PQ:PR=2:1$

    (b) If the vector $5i-\alpha j+k$ is perpendicular to the line $r=i-4j+t(2i+3j-4k)$.Find the value of α

19. (a) Find the vector equation of the line passing through the points $A(-2,2,-4)$ and B$(0,1,-2)$, and state,in coordinate form ,its x-intercept.

    (b) Find the distance of the point P$(-2,5,-7)$ from the line AB in (a) above.

20. Four points have coordinates P(3,4,k),Q(13,9,2),R(1,2,3) and S(10,8,6).The lines PQ and RS intersect at M .Determine the:

    (a) Vector equation of lines PQ and RS

    (b) Value of k

    (c) Coordinates of M

TRIGONOMETRY

21. It is given that the angle θ satisfies the equation $\sin(2\theta+\frac{1}{4}\pi)=3\cos(2\theta+\frac{1}{4}\pi)$.

(a) Show that $\tan 2\theta = \frac{1}{2}$.

(b) Hence find, in surd form, the exact value of $\tan\theta$, given that θ is an obtuse angle.

22. (a) Given that $8 + co\sec^2\theta = 6\cot\theta$,find the value of $\tan\theta$.

(b) Hence find the exact value of $\tan(\theta + 45^0)$

23. (a) Express $\cos\theta + \sqrt{3}\sin\theta$ in the form $R\cos(\theta - \alpha)$,where $R > 0$ and $0 < \alpha < \frac{\pi}{2}$.Give the exact values of R and α

(b) Hence prove that $\frac{1}{(\cos\theta+\sqrt{3}\sin\theta)^2} = \frac{1}{4}\sec^2\left(\theta - \frac{\pi}{3}\right)$

24. (a) Prove that

$$(\cot\theta + co\sec\theta)^2 = \frac{1+\cos\theta}{1-\cos\theta}$$

(b) Hence solve,for $0 < \theta < 2\pi$, $3(\cot\theta + co\sec\theta)^2 = 2\sec\theta$

25. (a) Prove the identity

$$\frac{1}{\sin(x+30^0) + \cos(x+60^0)} = \sec x$$

(b) Hence solve the equation $\frac{2}{\sin(x+30^0)+\cos(x+60^0)} = 7 - \tan^2 x$ for $0^0 < x < 360^0$

26. (a) Solve $2\sin 2\theta = 3\cos\theta$ for $-180^0 \leq \theta \leq 180^0$

(b) Solve $\sin\theta - \sin 4\theta = \sin 2\theta - \sin 3\theta$ for $-\pi \leq \theta \leq \theta$

27. (a) Solve the equation $\tan(\theta - 60^0) = 3\cot\theta$ for $-90^0 < \theta < 90^0$.

(b) Show that

$$\frac{\tan\beta}{\sin\beta} - \frac{\sin\beta}{\tan\beta} \equiv \tan\beta\sin\beta$$

28. (a) Simplify

$$\frac{\sin 105^0 - \sin(-15^0)}{\cos 105^0 + \cos(-15^0)}, \text{giving your answer in the form A}\sqrt{3}$$

(b) Given that $x = \tan\theta - \sin\theta$ and ,$y = \tan\theta + \sin\theta$.Prove that

$$(x^2 - y^2)^2 = 16xy$$

(c) If P,Q and R are angles of a traingle prove that ;

$$\frac{1}{p}\cos^2\left(\frac{P}{2}\right) + \frac{1}{q}\cos^2\left(\frac{Q}{2}\right) + \frac{1}{r}\cos^2\left(\frac{R}{2}\right) = \frac{(p+q+r)^2}{4pqr}$$

GEOMETRY

29. (a) $P(ap^2, 2ap)$ and $Q(aq^2, 2aq)$ are points on the parabola $y^2 = 4ax$.If the chord passes through the focus ,show that $pq = -1$.If M is the midpoint of PQ ,deduce that the locus of M is $y = 2a(x - a)$

    (b) Show that the equation $y^2 = 9(x + y)$ represents a parabola;hence determine its focus and directrix

30. (a) A conic section is given by $x = 4\cos\theta$; $y = 3\sin\theta$.Show that the conic section is an ellipse and determine its eccentricity

    (b) Given that the line $y = mx + c$ is atangent to th ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$,show that $c^2 = a^2m^2 + b^2$.Hence determine the equations of the tangents at the point $(-3, 3)$ to the ellipse $\frac{x^2}{16} + \frac{y^2}{9} = 1$.

31. The parametric coordinate of a curve is $(4\cos\theta, 3\sin\theta)$.

    (a) Show that the curve represents an ellipse and hence determine its eccentricity.

    (b) Find the equations of tangents to the ellipse in (a) above which passes through a point $(-3, 3)$

32. (a) Find the equation of the tangent to the parabola $y^2 = 4ax$ at the point $P(at^2, 2at)$; and write down the equation of the tangent at the point $Q(9a, -6a)$.

    (b) Given the ellipse $\frac{x^2}{8} + \frac{y^2}{6} = 1$, find the

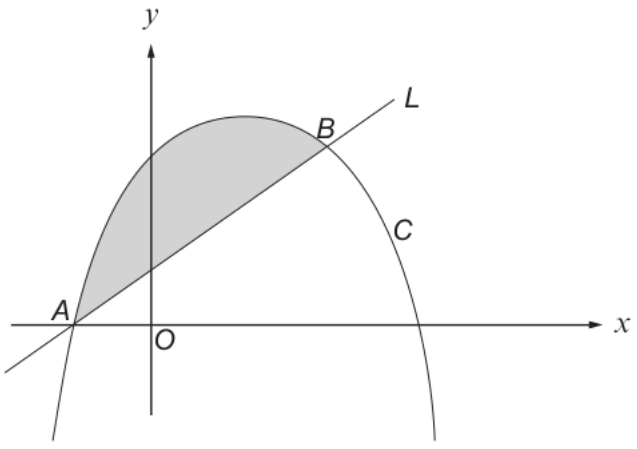
        i. coordinates of the focii

        ii. length of a latus rectum.

33. Determine the equation of the circle with centre at $(1, 5)$ and has a tangent passing through the points A$(-1, 2)$ and B$(0, -2)$

ANALYSIS

34. The sketch shows the curve C with equation $y = 14 + 5x - x^2$ and line L with equation $y = x + 2$. The line intersects the curve at the points A and B.



(a) Find the coordinates of A and B.

(b) Calculate the area enclosed by L and C.

35. (a) Given that $y = \cot^{-1} x$, show that $\frac{dy}{dx} = \frac{-1}{x^2+1}$

(b) Express $\frac{6x^2-10x-9}{(2x+3)(x^2+1)}$ in terms of partial fracions

(c) Hence find $\int \frac{6x^2-10x-9}{(2x+3)(x^2+1)}$

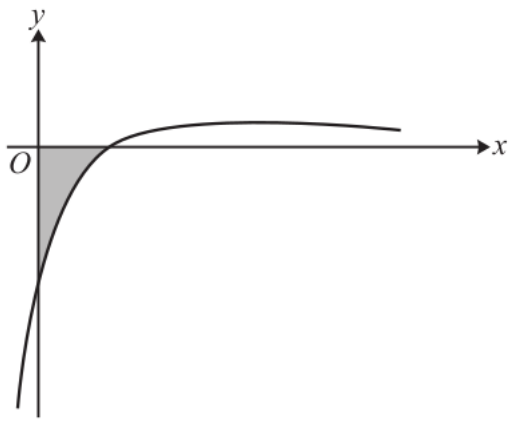
36. The parametric equations of a curve are $x = t + 4\text{In}t, y = t + \frac{9}{t}$,for $t > 0$.

(a) Show that

$$\frac{dy}{dx} = \frac{t^2 - 9}{t^2 + 4t}$$

(b) The curve has one stationary point.Find the y - coordinate of this point and determine whether it is a maximum or a minimum point.

37. The diagram below shows part of the curve $y = \frac{2x-1}{(2x+3)(x+1)^2}$



Show that the exact area of the shaded region is given by $1 + 8In\frac{8}{9}$.

38. (a) Show that $\cos 3x = 4\cos^3 x - 3\cos x$

(b) Hence show that

$$\int_0^{\frac{1}{6}\pi} (4\cos^3 x + 2\cos x)dx = \frac{17}{6}$$

39. (a) Differentiate $\frac{x^3}{\sqrt{(1-2x^2)}}$ with respect to x

(b) The period ,T of a swing of a simple pendulum of length ,l is given by the equation $T^2 = \frac{4\pi^2 l}{g}$,where g is the acceleration due to gravity.An error of 2% is made in measuring the length ,l .Determine the resulting percentages error in the period ,T

(c) If $y = 3x^2 - x$ .show that $y\frac{d^2y}{dx^2} + \frac{dy}{dx} - 6y + 1 = 6x$

40. A large industrial water tank is such that, when the depth of the water in the tank is x metres, the volume V$m^3$of water in the tank is given by .

$$V = 243 - \frac{1}{3}(9 - x)^3$$

Water is being pumped into the tank at a constant rate of 3.6 m^3 per hour. Find the rate of increase of the depth of the water when the depth is 4 m, giving your answer in cm per minute.

41. Determine the nature of the turning points of the curve

$$y = \frac{x^2 - 6x + 5}{(2x - 1)}$$

,Sketch the graph of the curve for $x = -2$ to $x = 7$.State any asymptotes.

42. (a) Solve the differential equation $\frac{dy}{dx} + 3y = e^{2x}$ given that when $x = 0, y = 1$

    (b) The acceleration of a particle after time t seconds is given by $a = 5 + \cos\frac{1}{2}t$.If initially the particle is moving at $1ms^{-1}$,find its velocity after 20 seconds and the distance it would have covered by then.

43. (a) Find

$$\int x^3 e^{x^4} dx$$

    (b) Use the substitution $t = \tan x$ to find

$$\int \frac{1}{1 + \sin^2 x} dx$$

44. (a) Express $f(x) = \frac{x^4+2x}{(x-1)(x^2+1)}$ into partial fractions

    (b) Evaluate $\int_2^4 f(x)dx$

45. The diagram below shows a sketch of the curve $y = 3x - x^2$. The curve intersects the x -axis at the origin and at the point A. The tangent to the curve at the point B(2,2) intersects the x -axis at the point C.

    (a) Find the equation of the tangent to the curve at B.

    (b) Find the area of the shaded region.

46. (a) Given that $y = e^{\tan^{-1} x}$,show that

$$(1+x^2)\frac{d^2y}{dx^2} + (2x-1)\frac{dy}{dx} = 0$$

(b) Differentiate x^{3x} with respect to x

47. (a) Solve the differential equation $(1+x^2)\frac{dy}{dx} = 2 + y^2$

(b) In a culture of bacteria ,the rate of growth is proportional to the population present at time t.The population doubles every hour.Given that the initial population ,P_0 is three million,determine after how many hours the population will be 300 million

48. (a) Differentiate e^{kx} from first principles

(b) Use small changes to show that $(16.02)^{\frac{1}{4}} = 2\frac{1}{1600}$

(c) Differentiate $\frac{e^{5x}\cos 2x}{\ln(1-x)}$ with respect to x

49. (a) Show that

$$\int_0^1 \frac{\ln(x+1)^2}{x+1}dx = (\ln 2)^2$$

(b) Express $5 + 4x - x^2$ in the form $a + b(x-2)^2$,hence evaluate;

$$\int_2^5 \frac{dx}{\sqrt{5+4x-x^2}}$$

50. (a) Given that $y = e^{\tan^{-1} x}$,show that

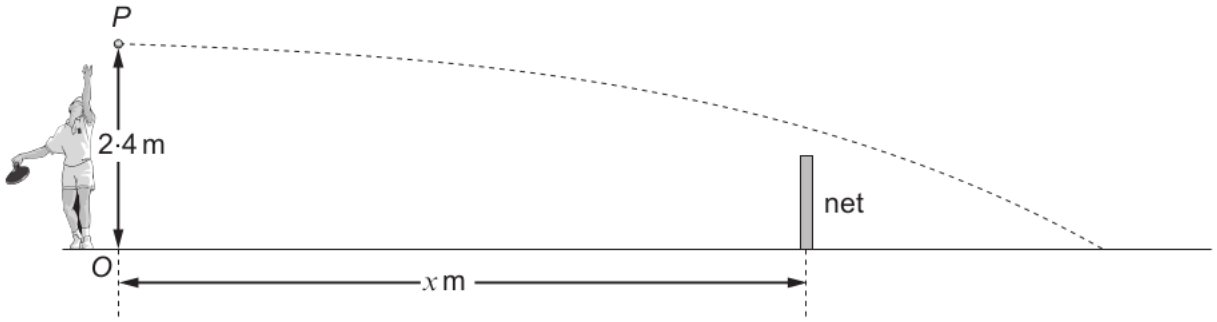
$$(1+x^2)\frac{d^2y}{dx^2} + (2x-1)\frac{dy}{dx} = 0$$

(b) Differentiate $\cos(x^2e^x)$ with respect to x.

APPLIED MATHEMATICS (P425/2)

MECHANICS

51. A tennis ball is projected with velocity vector $(30i - 1.4j)$ ms^{-1} from a point P which is at a height of 2.4 m vertically above a horizontal tennis court. The ball then passes over a net of height 0.9 m, before hitting the ground after $\frac{4}{7}$s The origin O lies on the ground directly below the point P. The base of the net is x m from O.



(a) Find the speed of the ball when it first hits the ground, giving your answer correct to one decimal place.

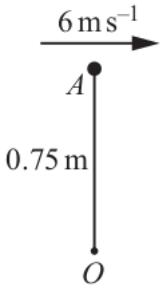
(b) After $\frac{2}{5}$s, the ball is directly above the net.

i. Find the position vector of the ball after $\frac{2}{5}$s

ii. Hence determine the value of x and show that the ball clears the net by approximately 16 cm.

(c) In fact, the ball clears the net by only 4 cm,explain why the observed value is different from the value calculated in (b)(ii).

52. One end of a light inextensible string of length $0.75m$ is attached to a particle A of mass 2.8 kg. The other end of the string is attached to a fixed point O. A is projected horizontally with speed 6 ms^{-1} from a point 0.75 m vertically above O (see Fig below). When OA makes an angle θ with the upward vertical the speed of A is vms^{-1} .



(a) Show that $v^2 = 50.7 - 14.7\cos\theta$.

(b) Given that the string breaks when the tension in it reaches 200 N, find the angle that OA turns through between the instant that A is projected and the instant that the string breaks.

53. A particle P of mass 0.5 kg moves on a horizontal plane such that its velocity vector v ms^{-1} at time t seconds is given by

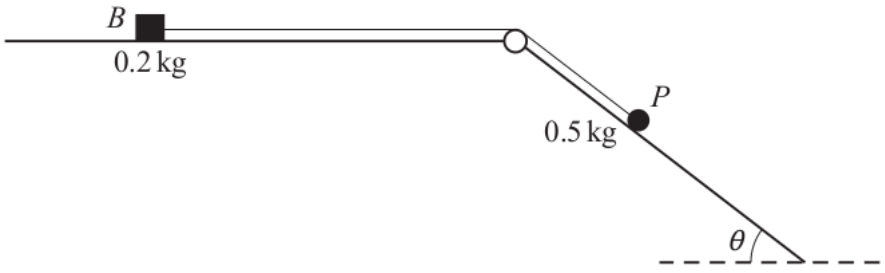
$$v = 12\cos(3t)i - 5\sin(2t)j$$

(a) Find an expression for the force acting on P at time t s.

(b) Given that when t = 0, P has position vector $(4i + 7j)$ m relative to the origin O, find an expression for the position vector of P at time t s.

(c) Hence determine the distance of P from O at time $t = \frac{\pi}{2}$

54. The diagram below shows a small block B, of mass 0.2 kg, and a particle P, of mass 0.5 kg, which are attached to the ends of a light inextensible string. The string is taut and passes over a small smooth pulley fixed at the intersection of a horizontal surface and an inclined plane.The block can move on the horizontal surface, which is rough. The particle can move on the inclined plane, which is smooth and which makes an angle of i with the horizontal where $\tan\theta = \frac{3}{4}$ .The system is released from rest. In the first 0.4 seconds of the motion P moves $0.3m$ down the plane and B does not reach the pulley.



(a) Find the tension in the string during the first 0.4 seconds of the motion.

(b) Calculate the coefficient of friction between B and the horizontal surface

55. An object of mass $4kg$ is initially at rest at a point whose position vector is $(-4i + 2j)m$.If its acted upon by a force $F = (14i + 21j + 24k)N$. Find

(i) acceleration of the object

(ii) its velocity and speed after $2seconds$

(iii) its distance from the origin after 4seconds

56. A particle is projected from a point on level ground such that its initial velocity is $60ms^{-1}$ at an angle of elevation 30^0 and taking $g = 10ms^{-2}$,find

(a) the time taken for the particle to reach its maximum height

(b) the maximum height

(c) the time of flight

(d) the horizontal range of the particle

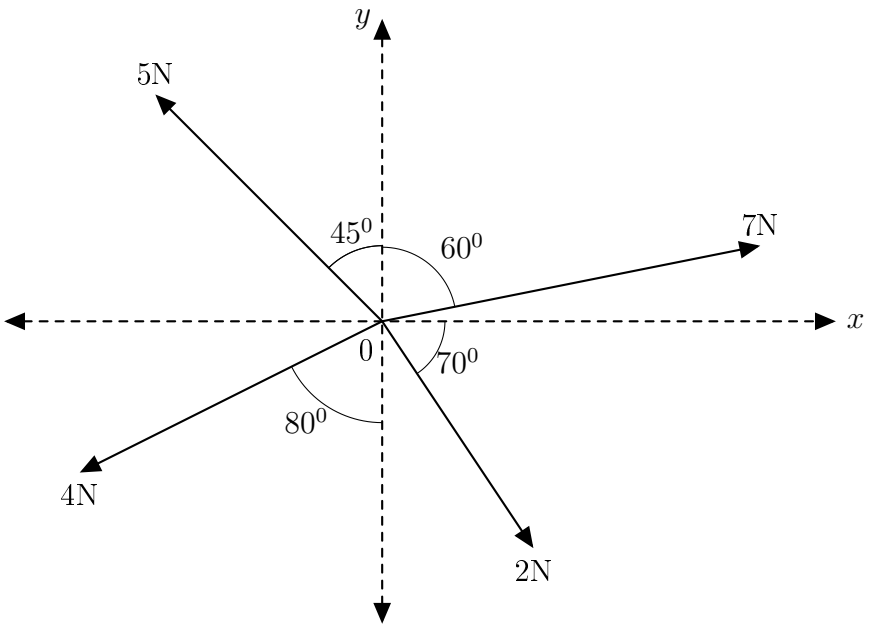
57. Two particles of masses 6kg and 3kg are connected by a light inelastic string passing over a smooth fixed pulley. Find;

    (a) Acceleration of the particles

    (b) The tension in the string

    (c) The force on the pulley

58. The figure below shows a system of forces acting on a particle placed at O.Find the magnitude and direction of their resultant.



59. (a) A car of mass 1200kg pulls a trailer of mass 300kg up a slope of 1 in 100 against a constant resistance of 0.2N per kg .If the car moved at a constant speed of $1.5ms^{-1}$ for 5 minutes,calculate the ;

        i. tension in the tow bar

        ii. workdone by the car engine during this time

    (b) A car of mass 800kg moved with a constant acceleration of $0.4ms^{-2}$ along a horizontal straight road against a resistance to motion of $250N$.Find the power developed at the instant when the car moved at $10ms^{-1}$

60. ABCD is arectangle in which AB=5M,BC=3M.forces of 2N,4N,3N and 11N act along AB,BC,CD and DA respectively,their directions being given by the order of the letters.Taking AB as the x-axis and AD as the y-axis .find the resultant force and the moment about A.

61. At time $t = 0$,the position vector $\mathbf{r}$ and velocity $\mathbf{v}$ of two trains A and B are as follows.

Trains	Velocity vector	Position vector
A	$V_A = (-6i + k)ms^{-1}$	$r_A = (i + 2j + 3k)m$
B	$V_B = (-5i + j + 7k)ms^{-1}$	$r_B = (4i - 14j + k)m$

    If the trains maintain these velocities,find the :

(a) Position of B relative to A at time t

(b) time that elapses before the trains are closest to each other

(c) least distance between the trains in the subsequent motion

NUMERICAL ANALYSIS

62. (a) The numbers $a = 26.23, b = 13.18$ and $c = 5.1$ are calculated with percentage errors $4, 3$ and 2 respectively.Find the errors in a, b and c hence the limits within which the exact value of the expression $ab - \frac{b}{c}$ lies correct to 3 decimal places

(b) Hence find the absolute error,relative error and percentage error in the above expression.

63. (a) Use the trapezium rule with 7 ordinates to estimate $\int_0^6 xe^{-x}dx$ correct to 3 significant figures

(b) Find the percentage error made in your estimation ,giving your answer to 2 deciml places .Suggest how this error may be reduced.

64. Jinja and Mukono are 66km apart.At 8:00am ,Gad starts cycling towards Mukono from Mbikko town which is between Jinja and Kampala 2km away from jinja.If at 8:00pm,he has only covered 36km,estimate ,

(a) His distance from mukono at 10:00pm

(b) When he reaches mukono.

65. The distance between Buikwe and Lugazi town is 20km.Tenga, kibubu and makonge are 8km, 12km and 16km respectively from lugazi and the taxi charges are also respectively 500/=, 800/=, 1000/= and 1500/=. Namboowa is going to Visit her brother Kamyuka living 11km from lugazi

(i) Find how much she will be charged in this taxi

(ii) Suppose she had only 850/= and the taxi left her at a distance worth the money, find how far from Buikwe town the taxi leaves her

66. (a) Derive the simplest iterative formulae based on Newton Raphson method for the equation $(x-2)\ln x = x - 1$ and show that it is given by :

$$x_{n+1} = \frac{x_n(2\ln x_n + x_n - 3)}{x_n \ln x_n - 2}; n = 0, 1, 2, 3 \cdots$$

(b) Construct a flow chart that ;

i. Reads initial approximations (x_0)

ii. Computes and limits the error to a root corrected to 3 decimal places.

iii. Prints the root

(c) Using $x_0 = 4$ as the first approximation ,perform a dry run for the flow chart above.

67. The table values of $\tan\Theta$ have been extracted from four figure tables

Θ	75	76	77	78	79
$\tan\Theta$	3.7321	4.0108	4.3315	4.7046	5.1446

Estimate

(i) $\tan^{-1}(4.6500)$

(ii) $\tan 79^0 36'$

68. The charges of sending parcels by JEFF distributing company depends on the weights of the parcels. For the parcels of weight 500g, 1kg, 1.5kg, and 2kg the charges are 1000/=, 2000/=, 3500/=, 4000/= respectively. Estimate

(i) What the distributor would charge for a parcel of weight 450g

(ii) What the distributor would charge for a parcel of weight 1.8kg

(ii) If the sender pays 6200/= what is the weight of his parcel

69. Given the numbers $x = 4, y = 6$ and $z = 8$ all measured to their nearest integers,find the minimum and maximum values

(a) $\frac{z-x}{y}$

(b) $\frac{x(y-z)}{z}$

70. The numbers $x = 4.6, y = 13.8$ and $z = 80.0$ are calculated with percentage errors of $0.5, 0.5$ and 0.05 respectively.Calculate the relative error in the expression $\frac{xy}{z}$

71. Given the numbers $x = 30.75$ and $y = 4.125$ all measured to their nearest number of decimal places indicated.

(a) state the maximum possible errors in x and y

(b) find the absolute error in the quotient $\frac{x}{y}$

(c) find the limits within which the exact value of the quotient $\frac{x}{y}$ lies

72. (a) Show graphically that the equation $e^{2x} + 4x = 5$ has one real root between 0 and 1

(b) Use the Newton- Raphson iterative method to find the root of the equation in (a) above giving your answer correct to 2 decimal places

73. (a) Show that the iterative formulabased on Newton Raphson's formula for finding the root of the equation $X = \sqrt[6]{N}$ is given by

$$x_{n+1} = \frac{5}{6}\left[x_n + \frac{N}{5x_n^5}\right]$$

(b) Draw a flow chart that:

(i) Reads N and the initial approximation x_0

(ii) Computes and prints the roots to 3 d.p

(iii) Print N and the root

(c) Taking N=26 and $x_0 = 1.5$ perform a dry run for the flow chart.

74. (a) Use the trapezium rule with 6 ordinates to estimate the area enclosed by the curve $y = xe^{-x^2}$,the x-axis and the lines $x = 1$ and $x = 3$.Give your answer to 4 d.p.

(b) Find the exact value of $\int_1^3 xe^{-x^2}dx$

(c) Find the percentage error in the estimation

75. Use the trapezium rule with 5 strips to estimate $\int_1^5 \frac{1}{3+x^2}dx$ to 3 d.p and find the percentage error made in the estimation.Hence,state ways of reducing such error

76. By drawing graphs of $y = e^{2x}$ and $y = 5x + 1$ on the same axes ,show that the equation $e^{2x} - 5x - 1 = 0$ has a root between 0 and 1.0 ,correct the root x_0 to 1 decimal place .Hence using x_0,the initial approximation and the newton Raphson method ,find the root correct it to 3 decimal places.

STATISTICS AND PROBABILITY

77. For a set of ten data items

$$\sum(x - 20) = -140 \qquad \sum(x - 20)^2 = 2050$$

Find their mean and standard deviation

78. In an agricultural experiment ,320 plants were grown on a plot.The lengths of the stems were measured ,to the nearest centimetre,10 weeks after planting.The lengths were found to be distributed as in the following table.

Length,x(cm)	Number of plants.
$20.5 \leq x < 32.5$	30
$32.5 \leq x < 38.5$	80
$38.5 \leq x < 44.5$	90
$44.5 \leq x < 50.5$	60
$50.5 \leq x < 68.5$	60

(a) Calculate an estimate of the :

i. Mean of the stem lengths.

ii. Median of the stem lengths.

(b) Display the data on a histogram and use it to estimate the mode

79. Lyn buys electrical components from one of 3 suppliers A, B, C, in the ratio 2 : 1 : 7. The probability that the component is faulty is 0.33 for A, 0.45 for B and 0.05 for C. Lyn selects a component at random.

(a) Find the probability that the component works.

(b) Given that the component works, find the probability that Lyn bought the component from supplier B.

80. The cost of making a well formulated feed for the layer birds on Mr Ronald's Poultry farm is calculated from the cost of Maize bran,Broken maize ,lime and concentrate .The table below gives the cost of these items in 2021 and 2022.

ITEMS	Price(UGX) in 2021	Price (UGX) in 2022	Weight
Maize bran/kg	500	735	12
Lime/kg	500	600	2
Broken maize/kg	800	1400	5
Concentrate/kg	196000	215600	1

Using 2021 as the base year

(a) Calculate the price relative for each item hence find the simple price index for the cost of making a complete feed

(b) Find the weighted aggregate price index for the cost of the feed

81. Three events A,B and C are such that A and B are independent ,A and C are mutually exclusive.Given that $P(A) = 0.4, P(B) = 0.2, P(C) = 0.3$ and $P(CnB) = 0.1$.find $P(A/AUC)$

82. Events M and N are such that $3P(M \cap N) = 2P(\overline{M} \cap N) = P(\overline{M} \cap \overline{N}), P(M) = 0.6$.Find the probability that:

(a) Neither events occur

(b) Only one event occurs

83. The table below shows height in centimetres of 25 students in a certain school.

Height	< 10	< 20	< 25	< 30	< 40	< 55	< 60
Frequency	0	3	4	8	2	6	2

(a) Find the:

(i) Mean height

(ii) Variance

(iii) Middle 70% of the height.

(b) Represent the above information on a histogram and use it to estimate the modal height.

84. (a) The information below shows the grades scored by a group of students in biology and mathematics examinations

Student	1	2	3	4	5	6	7	8	9
Math	A	E	F	A	B	B	C	D	B
Biology	C	0	E	C	C	B	A	F	D

Compute the rank correlation coefficient for the perfomance between the two subjects .Comment on your result at 1% level of significance

(b) The table below shows the distribution of heights of 134 students in a Maths Class.

Heights	$20- < 30$	$30- < 35$	$35- < 40$	$40- < 55$	$55- < 65$	$65- < 80$	$80- < 90$
No of students	9	12	27	13	25	18	30

(a) Calculate the mean mark

(b) Construct a cumulative frequency curve(ogive) and use it to find

(i) Median mark

(ii) Range between the 20^{th} and 60^{th} percentile

(iii) Range of the middle 40% of the mark

(iv) Probability that student selected at random scored below 60 marks.

85. A and B are events such that P(A)=$\frac{8}{15}$,P(B)=$\frac{1}{3}$ and P(A/B)=$\frac{1}{5}$.Find the probability that :

(i) neither A nor B occurs

(ii) Event B does not happen if event A has occured

(iii) Both events occur.

(iv) Only one of the two events occurs.

86. A school bus can arrive early,on time or late.The probability that it is late is 0.25. The probability that it is on time or late is $\frac{2}{3}$.Find the probability that the school bus is

(i) On time

(ii) early or on time

87. A bag contains 5 red balls and 3 blue balls .Three balls are selected in succession at random from it with replacement.Find the chance that

(a) they are of the same colour

(b) the first and last are of the same color

(c) At most one blue ball is drawn

88. A discrete r.v X has the following p.d.f

$$P(X=x)=\begin{cases} px & ;x=1,2,\cdots n \\ 0 & ;\text{otherwise} \end{cases}$$

Find

(i) values of p and n for which E(X)=7

(ii) P$(2<X<7/x\geq 4)$

89. A continuous r.v X has the following p.d.f.

$$f(x)=\begin{cases} \beta(3-x) & ;1\leq x\leq 2 \\ \beta & ;2\leq x\leq 3 \\ \beta(x-2) & ;3\leq x\leq 4 \\ 0 & ;\text{otherwise} \end{cases}$$

(a) Sketch $f(x)$ hence deduce the mean and median of X

(b) Find

(i) the value of β

(ii) $P(|X-2|<0.5)$

90. The distribution function of a continuous r.v X is as follows

$$F(x)=\begin{cases}0 & ;x\leq 0\\ \frac{1}{2}x^2 & ;0\leq x\leq 1\\ m+nx^3 & ;1\leq x\leq 2\\ 1 & ;x\geq 2\end{cases}$$

Find

(a) the value of m and n

(b) $f(x)$

(c) Sketch the graph of f.Find

i. the mode

ii. the median

iii. the mean of X

91. It is given that

$$f(x)=\begin{cases}\beta(x+2) & ;-2<x<0\\ \frac{1}{2}\beta(3-x) & ;0<x<2\\ 0 & ;\text{otherwise}\end{cases}$$

Find

(a) the value of β

(b) $F(x)$

(c) $P(-1<X<1)$

(d) $P(1<X<3)$

92. The marks scored in an exam are normally distributed with mean 56 and standard deviation 14.2 .Find the probability that a candidate picked at random scored

(a) between 62 and 72 marks

(b) atleast 40 marks

93. Patience has four coins. One of these coins is biased so that the probability of obtaining a head is 0.6.The other three coins are fair. Patience throws the four coins at the same time. The random variable X denotes the number of heads obtained.

(a) Show that the probability of obtaining exactly one head is 0.225.

(b) Complete the following probability distribution table for X .

x	0	1	2	3	4
$P(X = x)$	0.05	0.225			0.075

(c) Given that $E(X) = 2.1$, find the value of $Var(X)$.

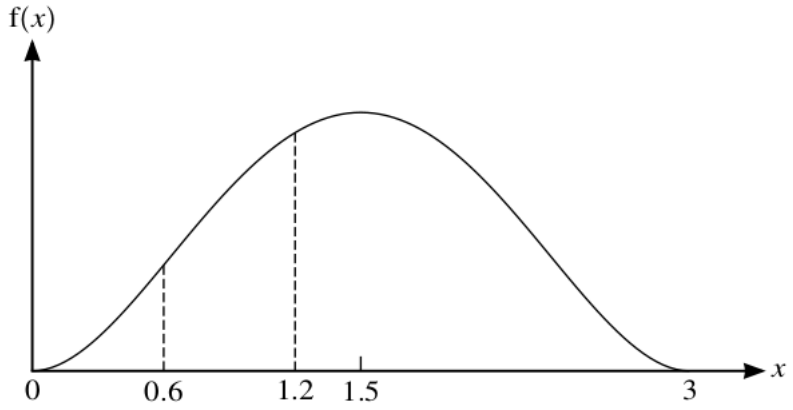
94. On a farm ,35%of the cows are infected by a tick disease.If a random sample of 400 cows is selected from the farm ,find the probability that:

(a) less than 30% of the cows are infected

(b) more than 155 cows are infected

(c) between 120 and 150 inclusive cows are infected

95. The diagram below shows the graph of the probability density function, f, of a random variable X that takes values between $x = 0$ and $x = 3$ only. The graph is symmetrical about the line $x = 1.5$.



(a) It is given that $P(X < 0.6) = a$ and $P(0.6 < X < 1.2) = b$. Find $P(0.6 < X < 1.8)$ in terms of a and b .

(b) It is now given that the equation of the probability density function of X is

$$f(x) = \begin{cases} kx^2(3-x)^2 & ;0 \le x \le 3 \\ 0 & ;\text{otherwise} \end{cases}$$

i. Show that $k = \frac{10}{81}$

ii. Find Var (X.)

96. Bulbs in certain houses have meanlife time of 160 hours with standard deviation of 30 hours ,assuming the bulbs life is normally distributed.Calculate the:

(a) Probability that the bulb life lies between 150 hours and 180 hours

(b) Range symmetrical about the mean within which 75% of the bulb lives life.

97. Three events A,B and C are such that A and B are independent ,A and C are mutually exclusive.Given that $P(A) = 0.4, P(B) = 0.2, P(C) = 0.3$ and $P(C \cap B) = 0.1$,.find

(a) $P(A \cup B^1)$

(b) $(A/A \cup C)$

98. The marks of 12 students in aptitude and stastics test were as follows

Aptitude	58	52	48	30	48	20	32	50	38	12	36	12
Stastics	90	72	60	38	70	35	33	64	48	24	50	18

(a) Plot a scatter diagram for the data.comment on the relationship between the two tests

(b) Draw a line of best fit for the scatter diagram,hence find x when y=68

(c) Calculate the rank correlation coefficient for the scores in the two tests .comment on your results at 1% level of significance

99. (a) A thrown biased dice is such that an even number is twice as likely to show up as an odd number.Find the probability of obtaining

i. A number less than 4

ii. An odd or prime number

(b) A box contains 3yellow ballotpapers,4 red ballot papers, and 1 green ballot paper.Two ballot papers are picked in succession at random without replacement .Find the probability that

i. there is no yellow ballot paper.

ii. Atleast one red ballot paper is picked.

100. (a) An object with position vector 5i-8k moves with a constant speed of $5\sqrt{17}$ ms^{-1} in the direction 2i-2j+3k. Find its distance from the origin after 2 seconds. [5 Marks]

(b) A particle of mass 2kg is acted upon by a force $24t^2i + (36t - 6)j - 12tk$.Initially the particle is at a point $(3, -4, 4)$ and moving with velocity $16i + 15j - 8k$. Find the

(i) speed of the particie after one second .

(ii) distance covered by the particle in the first 2 seconds.

(iii) rate of doing work when t=2seconds.

END

PURE MATHEMATICS P425/1

1. Algebra

   (a) For the quadratic equation $ax^2 + bx + c = 0$

   $$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

   (b) For an arithmetic series (A.P)

   $$u_n = a + (n-1)d$$
   $$S_n = \frac{1}{2}n\{2a + (n-1)d\}$$

   (c) For a geometric series (G.P)

   $$u_n = ar^{n-1}$$
   $$S_n = \frac{a(1-r^n)}{1-r} \qquad r \neq 1$$
   $$S_\infty = \frac{a}{1-r} \qquad |r| < 1$$

   (d) Binomial expansion

   $$(a+b)^n = a^n + \begin{pmatrix} n \\ 1 \end{pmatrix} a^{n-1}b + \begin{pmatrix} n \\ 2 \end{pmatrix} a^{n-2}b^2 + \begin{pmatrix} n \\ 3 \end{pmatrix} a^{n-3}b^3 + \cdots + b^n$$

   where n is a positive integer

   $$\begin{pmatrix} n \\ r \end{pmatrix} = \frac{n!}{r!(n-r)!}$$
   $${}^nC_r = \frac{n!}{r!(n-r)!}$$
   $$(1+x)^n = 1 + nx + \frac{n(n-1)}{2!}x^2 + \frac{n(n-1(n-2)}{3!}x^3 \cdots$$

   Where n is rational and $|x| < 1$

   $${}^nP_r = \frac{n!}{(n-r)!}$$

   Where $r \leq n$

   (e) Summations

   $$\sum_{r=1}^{n} r = \frac{1}{2}n(n+1)$$
   $$\sum_{r=1}^{n} r^2 = \frac{1}{6}n(n+1)(2n+1)$$
   $$\sum_{r=1}^{n} r^3 = \frac{1}{4}n^2(n+1)^2$$

(c) $|a.a| = |a|^2$

(d) $a.(b + c) = a.b + a.c$

(e) $a.(kb) = (ka).b = k(a.b)$ where k is a constant

(f) $a.b = |a||b|\cos\theta$

(g) The cartesian equation of the line

$$\frac{x - a}{x_1} = \frac{y - b}{y_1} = \frac{z - c}{z_1}$$

APPLIED MATHEMATICS P425/2

1. Numerical Methods

   (a) Trapezium rule

$$\int_a^b f(x)dx \approx \frac{1}{2}h\{y_o + 2(y_1 + y_2 + \cdots + y_{n-1}) + y_n\}$$

   Where $h = \dfrac{b-a}{n}$

   (b) Newton Raphson Method

$$x_{n+1} = x_n - \frac{f(x_n)}{f^1(x_n)} \qquad \text{Where } x = 0, 1, 2, \cdots$$

   (c) Ordinates and sub intervals

$$\text{The number of sub intervals} = \text{Number of ordinates} - 1$$

   (d) The maximum possible error made due to rounding off is given by

$$\text{Error} = 0.5 \times 10^{-n}$$

   Where **n** is the number of decimal places rounded off to

   (e) Error

$$\text{Error } = \text{Exact value} - \text{Approximate value.}$$

   (f) Absolute error This is the actual size of the error and is always positive .It is the magnitude of the error

$$\text{Error } = |\text{Exact value} - \text{Approximate value}|.$$

   (g) Relative error

$$\text{Relative Error } = \frac{\text{Absolute error}}{\text{Exact value}}$$

   The relative error must always be positive

$$\text{Relative Error } = \frac{|\text{Error}|}{\text{Exact value}}$$

   (h) Percentage error

$$\text{Percentage Error } = \frac{|\text{Error }|}{\text{Exact value}} \times 100$$

   (i) The interval or range with in which the exact value lies is given by Min value$\leq$ Exact value $\leq$ Max value or [Min,Max]

(j) Absolute error $= \frac{\text{Maximum value} - \text{Minimum value}}{2}$

2. Probability and Statistics

(a) The mean for ungrouped data is calculated using the formula

$$\text{Mean} = \frac{\text{sum of data values}}{\text{number of values in the data}}$$

$$\overline{X} = \frac{\sum x}{n}$$

(b) The mean for grouped data is calculated using the formula

$$\text{Mean} = \frac{\sum fx}{\sum f}$$

Where **x** is the class mark and **f** is the frequency

(c) The mean for grouped data when given an assumed means is calculated using the formula

$$\text{Mean} = A + \frac{\sum fd}{\sum f}$$

Where **A** is the assumed mean or working mean

d is the deviation given as $d = x - A$

(d) For grouped data ,the median is calculated using

$$\text{Median } = L_1 + \left(\frac{\frac{\sum f}{2} - CF_b}{f_m} \right) \times C$$

Where

$L_1 =$ Lower class boundary of the median class

$CF_b =$ Cummulative frequency before the median class

$f_m =$ frequency within the median class

$C =$ Class width

$\sum f =$ Total frequency

(e) For grouped data with equal class width the mode is calculated using

$$\text{Mode} = L_1 + \left(\frac{d_1}{d_1 + d_2} \right) \times C$$

Where

$$L_1 = \text{Lower class boundary of the modal class}$$
$$d_1 = \text{Modal frequency} - \text{Pre modal frequency}$$
$$d_2 = \text{Modal frequency} - \text{Post modal frequency}$$
$$C = \text{Class width}$$

(f) For grouped data ,the lower quartile is calculated using

$$q_1 = L_1 + \left(\frac{\frac{\sum f}{4} - CF_b}{f_m} \right) \times C$$

Where

$$L_1 = \text{Lower class boundary of the } q_1 \text{ class}$$
$$CF_b = \text{Cummulative frequency before the } q_1 \text{ class}$$
$$f_m = \text{frequency within the } q_1 \text{ class}$$
$$C = \text{Class width}$$
$$\sum f = \text{Total frequency}$$

(g) For grouped data ,the upper quartile is calculated using

$$q_3 = L_1 + \left(\frac{\frac{3\sum f}{4} - CF_b}{f_m} \right) \times C$$

Where

$$L_1 = \text{Lower class boundary of the } q_3 \text{ class}$$
$$CF_b = \text{Cummulative frequency before the } q_3 \text{ class}$$
$$f_m = \text{frequency within the } q_3 \text{ class}$$
$$C = \text{Class width}$$
$$\sum f = \text{Total frequency}$$

(h) Inter quartile range $= q_3 - q_1$

(i) For grouped data ,the variance is calculated using

$$\text{Var(x)} = \frac{\sum fx^2}{\sum f} - \left(\frac{\sum fx}{\sum f} \right)^2$$

(j) Standard deviation $= \sqrt{\text{Var(x)}}$

3. Index numbers

(a)

$$\text{Price relative } = \frac{p_n}{p_0} \times 100$$

Where

$p_n =$ Price of the commodity in the given year(new year)

$p_0 =$ Price of the commodity in the base year(old year)

(b)

$$\text{Simple price index} = \frac{\text{Sum of the price relatives}}{\text{Number of items (N)}} \times 100$$
$$= \frac{\sum\left(\frac{p_n}{p_0}\right) \times 100}{N}$$

(c)

$$\text{Simple aggregate price index} = \frac{\text{Current year price total}}{\text{Base price total}} \times 100$$
$$= \frac{\sum p_n}{\sum p_0} \times 100$$

(d)

$$\text{Weighted price index} = \text{Price relatives} \times \text{weights}$$
$$= \frac{p_n}{p_o} \times w \times 100$$

(e)

$$\text{Weighted aggregate price index} = \frac{\sum p_n w}{\sum p_0 w} \times 100$$

(f)

$$\text{Weighted average price index} = \frac{\sum \frac{p_n}{p_0} \times 100 \times w}{\sum w}$$

(g)

$$\text{Value index} = \frac{\sum p_n q_n}{\sum p_o q_o} \times 100$$

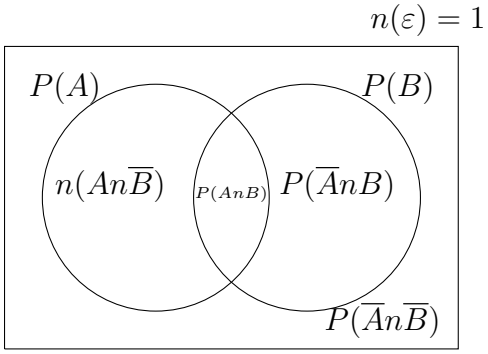
4. Spearman's rank correlation coefficient

$$\rho = 1 - \frac{6\sum d^2}{n(n^2-1)}$$

Where n is the difference between the rankings of a given scores and n is the number of pairs

5. Probability theory

   (a) For any events A and B



$$P(A) = P(A \cap \overline{B}) + P(A \cap B)$$
$$P(\overline{A}) = P(\overline{A} \cap B) + P(A \cup B)^1$$
$$P(B) = P(\overline{A} \cap B) + P(A \cap B)$$
$$P(\overline{B}) = P(A \cap \overline{B}) + P(A \cup B)^1$$
$$P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

   (b) $P(A) + P(\overline{A}) = 1$

   (c) $P(A \cup B)^1 = P(\overline{A} \cap \overline{B})$

   (d) $P(\overline{A} \cup \overline{B}) = P(A \cap B)^1$

   (e) $P(A/B) = \frac{P(A \cap B)}{P(B)}$ for $P(B) \neq 0$

6. Mechanics

   (a) For projectile motion

$$y = x \tan\theta - \frac{gx^2}{2u^2} sec^2\theta$$

   (b) For calculus

Physical quantity	Formula	units	Formula	units	Formula
Force	F=ma	N	$a = \frac{dv}{dt}$	ms^{-2}	k.e=$\frac{1}{2}mv^2$
Power	P=F.v	W	$v = \frac{dr}{dt} or \frac{ds}{dt}$	ms^{-1}	Avg accel=$\frac{v(t_2)-v(t_1)}{t_2-t_1}$
Work done	W=F.s or F.r	j	W=$\int_{t_1}^{t_2} f.vdt$	j	speed=$\|v\|$

The table gives $P(z) = \int_0^z \phi(z)dz$

If the random variable Z is distributed as the standard normal distribution N(0,1) then:

1. $P(o < Z < z_p) = P$(Shaded Area)
2. $P(Z > Z_p) = Q = ½ - P$
3. $P(Z > |Z_p|) = 1 - 2P = 2Q$

To obtain $p(i \leq r)$ use: $p(i \leq r) = 1 - p(i \geq r+1)$

Where a space in the table is empty the probability is less than 0.00005.
