The ministry of tourism and wild life has decided to establish a new tourist attraction on the shores of Lake Sulphite in Masaka District. A study was done and different sites were identified.

At the centre was divided into two sections one is going to be a zoo and the other is a herbarium surrounded with large botanical gardens, the third section would be Lake Sulphite where aquatic organisms would be stocked.

However after preparing them a stock crisis arose as the ministry lacked experts that would stock the zoo and the botanical gardens with relevant organisms that would attract tourists to the centre in order to raise some funds to maintain the place.

**Task**

Your school has been selected to help select relevant examples of organisms that would be stocked at the centre of the tourist attractions.
