

# WAKISSHA JOINT MOCK EXAMINATIONS

### Uganda Advanced Certificate of Education

### **PHYSICS**

## Paper 1

### 2 hours 30 minutes

#### INSTRUCTIONS TO CANDIDATES:

- Answer five questions, including at least one, but not more than two from each of the Sections A, B and C.
- Any additional question(s) answered will not be marked.
- Non programmable silent scientific calculators may be used.

### Assume where necessary:

Acceleration due to gravity	g	=	9.81 ms <sup>-2</sup>
Electron charge	e	=	1.6 x 10 <sup>-19</sup> C
Electron mass		=	$9.11 \times 10^{-31} \text{ kg}$
Mass of earth		=	$5.97 \times 10^{24} kg$
Planck's constant,	h	=	$6.6 \times 10^{-34} Js$
Stefan – Boltzmann's constant,	$\sigma$	=	$5.67 \times 10^{-8}  Wm^{-2}K^{-4}$
Radius of the earth		=	$6.4 \times 10^6 m$
Radius of the sun		=	$7.0 \times 10^8 m$
Radius of earth's orbit about the su	n	=	$1.5 \times 10^{11} m$
Speed of light in a vacuum		=	$3.0 \times 10^8 m$
Specific heat capacity of water		=	4,200Jkg <sup>-1</sup> K <sup>-1</sup>
Specific latent heat of fusion of ice		=	$3.34 \times 10^5  Jkg^{-1}$
Universal gravitational constant,	G	=	$6.67 \times 10^{-11} \text{Nm}^2 \text{kg}^{-2}$
Avogadro's number	$N_A$	=	$6.02 \times 10^{23}  mol^{-1}$
Density of mercury		=	$13.6 \times 10^3 kgm^{-3}$
Charge to mass ratio,	e/m	=	$1.8 \times 10^{11}  \text{Ckg}^{-1}$
The constant $\frac{1}{4\pi\epsilon_0}$		/= 1	$9.0 \times 10^9  F^{1} m$
Density of water		=	1000kgm <sup>-3</sup>
Gas constant	R	= 1	8.31Jmol K
Wien's displacement constant		=	$2.90 \times 10^{-3} \text{ m K}$
Surface tension of soap solution		= -	2.0 x 10 <sup>-2</sup> Nm <sup>-1</sup>
Electron charge to mass ratio, e/m		= 1	1.8 x 1011 C kg-1
One electron volt, (eV)		=	1.6 x 10 <sup>-19</sup> 1

Turn Over

- What is meant by dimensions of a physical quantity? (i)
- (01 mark)
- Give two uses of dimensions of physical quantities. (ii)
- (01 mark)
- (iii) The displacement, S, of a body moving with an initial speed, u, accelerating at a rate, a, to attain a velocity, v, is obtained from the expression:

$$S = \frac{v^2 - u^2}{2a},$$

Show that the above expression is dimensionally consistent.

(03 marks)

- Distinguish between perfectly elastic and perfectly inelastic (b) (i) collisions.
  - A car of mass m makes a head-on collision with another car of mass (ii) m<sub>2</sub> initially at rest. If the collision is perfectly elastic, show that;  $\frac{\Delta E}{E} = \frac{-4x}{(1+x)^2}$  where  $x = \frac{m_2}{m_1}$ .  $\Delta E$  is the loss in kinetic energy of m<sub>1</sub> (05 marks) and E<sub>0</sub> is its initial kinetic energy.
- Explain, using molecular theory, the origin of solid friction. (c) (i)
  - A car of mass 1 tonne moves along a straight track with a speed (ii) of 72 kmh<sup>-1</sup>. The car comes to a stop when brakes are steadily applied after travelling a distance of 0.09 km. Calculate the coefficient of friction between the surface of the track and the tyres; and state the energy changes which occur as the car comes to rest. (05 marks)

2. / (a)

Define the following terms:

(01mark) (01 mark)

Tensile stress (i) Tensile strain

(ii)

- A copper wire is stretched until it breaks. (b)
  - Sketch a stress strain graph for the copper wire and (04 marks) (i) explain the main features of the graph.
  - Explain what happens to the energy used to stretch the (04 marks) (ii) copper wire at each stage.
  - Derive the expression for the work done to stretch the (03 marks) (iii) copper wire by a distance, e, if its force constant is K.

	(c)	A steel wire of cross-section area 1 mm <sup>2</sup> is cooled from a temperature of 40°C to 20°C.  Find the:					
			(i) strain produced in the wire.	(02 marks)			
			(ii) force needed to prevent it from contracting.	(03 marks)			
			Take Young's modulus of steel = $2.0 \times 10^{11} \text{ Pa}$ ,				
			Coefficient of linear expansion = $1.1 \times 10^{-5} \text{ K}^{-1}$ .				
	(d)	What	is work-hardening?	(02 marks)			
3.	(a)	(i)	Define centripetal acceleration.	(01 mark)			
			Explain why a racing car can travel faster on a banked	Sale again			
			track than on an unbanked track of the same radius.	(03 marks)			
	(b)	(i)	State Kepler's laws of planetary motion.	(03 marks)			
		(ii)	A satellite of mass 100 kg is launched in a parking orbit				
			above the earth's surface. Calculate the height of the				
			satellite above the earth's surface.	(04 marks)			
	(c)	(i)	Define simple harmonic motion.	(01 mark)			
		(ii)	The piston of a car engine performs simple harmonic moti	on.			
			The piston has a mass of 500 g and its amplitude of vibrati				
		4.5cm. The revolution counter in the car reads 240 revolutions per minute.					
			Show that the piston above performs simple harmonic mot	tion and			
			derive an expression for its period.	(05 marks)			
			Hence calculate the maximum force on the piston.	(03 marks)			
4.	(a)		Define surface energy.	(01 mark)			
		(ii)	Explain the effect of temperature on surface tension of a li	quid. (03 marks)			
	(b)	Descri	ibe an experiment to determine the angle of contact of a	(05 marks)			
	(0)		using capillary method.	(06 marks)			
	(c)	(i)	State Bernoulli's principle.	(01 mark)			
		(ii)	Derive the principle in (c) (i) above.	(03 mark)			
	(d)	(i) Air flows over the upper surface of the wings of an aeroplane at a speed of 120 ms <sup>-1</sup> and past the lower surface of the wings					
			at 110 ms <sup>-1</sup> . Calculate the lift force on the aeroplane, if it h	nas			
	1757		a total wing area of 20 m <sup>2</sup> . (Density of air is 1.29 kgm <sup>-3</sup> ).	(03 marks)			
	-74	(ii)	A person standing near a railway line experiences a force	, and Roj			
			towards a fast moving train. Explain the observation.	(03 marks)			
	3 = 1		The Bernard	Turn Over			

SECTION B Define the following quantities; (01 mark) (a) 5. Thermometric property (01 mark) (i) Heat capacity (ii) State the type of thermometer you would use and justify your choice for (b) each of the tasks below. (02 marks) A gardener measuring the temperature of a green house. An engineer measuring the temperature at different points (ii) (02 marks) on the cylinder head of a car engine. Describe an experiment to determine specific heat capacity (i) (c) (06 marks) of a liquid using the method of mixtures. When a current of 2.5 A is passed through a coil of constant (ii)resistance 20  $\Omega$  immersed in 600 g of water at  $O^0C$  in a vacuum flask, the temperature of water raises to 10°C in 6 minutes. If instead the flask contained 300 g of water and 300 g of ice. what current must be passed through the coil if the mixture is to be heated to the same temperature in the same time? (05 marks) Explain why when starting fire, small pieces of charcoal or wood are (d) (03 marks) required. Define specific molar heat capacity of a gas at constant pressure. 6. (a) (i) (01 mark) Explain why specific molar heat capacity at constant pressure is (ii) greater than specific molar heat capacity at constant volume. (02 marks) Show that Cp - Cv = R, where Cp is molar heat capacity at constant (b) pressure, Cv is molar heat capacity at constant volume, and R is the (04 marks) molar gas constant. An ideal gas of specific heat capacity ratio 8 = 1.40 is expanded (c) adiabatically and reversibly from a pressure of 30 cmHg. It then undergoes a reversible isothermal compression to its original pressure. Finally it is expanded isobatically to its original volume. Sketch the P - V diagram showing the above processes. (02 marks) (i) Calculate:

(i) Define saturated vapour pressure. (01 mark)
(ii) Describe an experiment to determine the temperature dependence of saturated vapour pressure of water by dynamic method. (06 marks)

the temperature at the end of the isothermal compression.

the volume at the end of the adiabatic expansion.

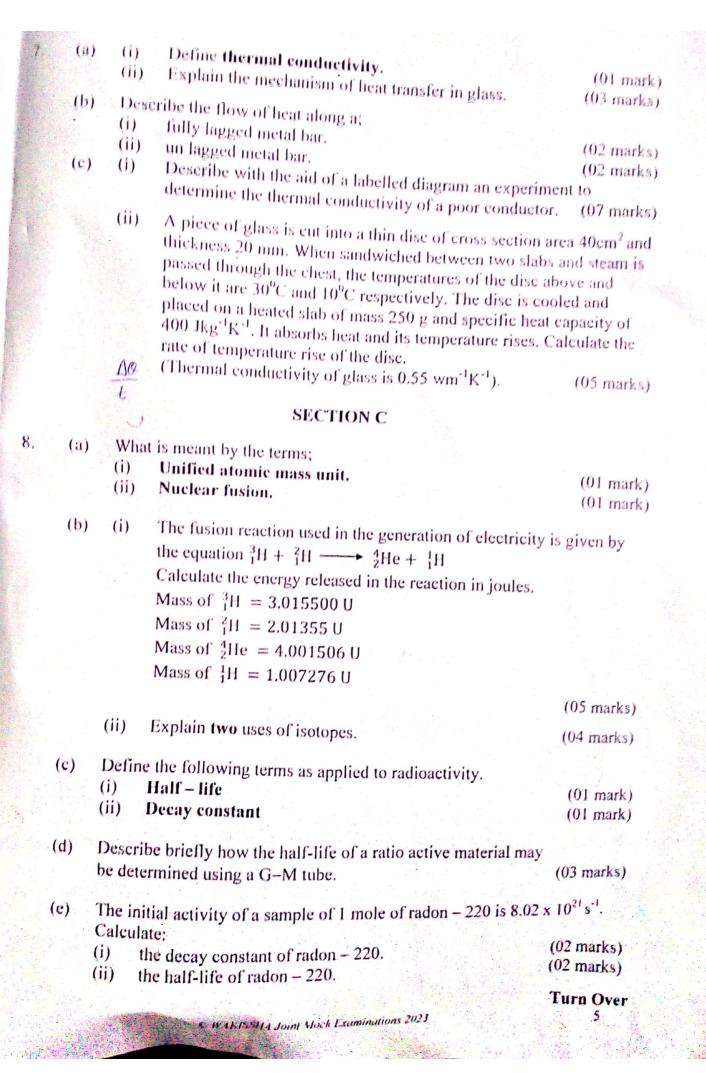

(ii)

(d)

(iii)

(02 marks)

(02 marks)

9 (a) (i) What is meant by the term "photon" (01 mark) (ii) State the laws of photoelectric emission. (04 marks) (b) The work function of potassium is 2.25 eV. Light having a wavelength of 360 nm falls on the metal. Calculate; (i) the stopping potential. (03 marks) the speed of the most energetic elections emitted. (ii) (02 marks) (c) (i) Define specific charge. (01 mark) (ii) With the aid of a well labelled diagram, describe J.J Thomson's experiment for determination of specific charge of an electron. (d) Electrons accelerated from rest through a potential difference of (06 marks) 3000 V enter perpendicularly a region of uniform magnetic field. If the flux density is 0.01 T. Calculate the radius of the electron orbit. (03 marks) 10. (a) (i) What are x-rays? With the aid of a well labelled diagram, describe how (ii) (01 mark) x-rays are produced. (05 marks) State the energy changes in the production of x-rays. (iii) (01 mark) (b) (i) State Bragg's law. An x-ray beam is produced when electrons accelerated (01 mark) (ii) through a p.d of 10 kV are stopped by a metal target. When the beam falls on a set of parallel atomic plates of a certain metal, at a glancing angle of 16°, a first order diffraction maximum occurs. Calculate the atomic spacing of the planes. (04 marks) What are cathode rays? (c) (i) Explain the motion of an electron directed into a uniform (01 mark) (ii) magnetic field. (03 marks) An electron accelerated from rest by a p.d of 100 V, enters (iii) perpendicularly into a uniform electric field of intensity 100 Vm<sup>-1</sup>. Find the magnetic field density, B, which must be applied perpendicularly to the field so that the electron passes undeflected through the field. (04 marks)
